Module 6 - AZ Administration

- 4 ways to connect
AZ CLI, AZ Powershell, Cloudshell, portal
- AZ Reserve Manager provides a constant management layer.
- Steps
 - WP creates a request
 - calls go to ARM API
 - Then ARM API triggers call ARM
 - ARM finds out what's your request
 - It submits our request to provider.
Provider deploys your request in ~~the~~ datacenter
- Templates
 - parameters.json, template.json
- RG and deployment
 - Group cannot be renamed
 - Group can have regions from different regions
- ▷ AZ dashboard
Portal, Slides

LOAD BALANCE

1) BASIC

[Load balance]
